Exam objectives - ASTRA Cybersecurity Sales Specialist

The published boundary of the examination

The objective list tells candidates and employers exactly which commercial cybersecurity judgements can be assessed. Questions are written to the final v1.0.1 objectives, not to hidden vendor knowledge or an unpublished technical syllabus.

The examination asks candidates to work from case evidence: stakeholder records, incident facts, product-scope documents, coverage data, POC results, assurance material, commercial terms and multi-party responsibility records.

Examination fact | Published specification

Linked learning | ASTRA Cybersecurity Sales Specialist programme
Objectives | 36
Domains | S1-S6
Scored questions | 40
Cases | 7, including 1 staged case
Duration | 100 minutes
Response formats | Single choice, exact set, row mapping, ordering, numeric

How to read an objective

Each objective begins with a scenario-based decision and identifies the evidence relationship the candidate must judge. The example concepts narrow the intended construct; they do not authorise questions about unrelated technical operations.

Regulatory objectives

India-specific objectives use supplied, dated official material. Release-time content must distinguish what has commenced from what is scheduled for later and must keep legal interpretation outside the seller's authority.

What is outside scope

The examination does not require exploit execution, threat hunting, security-tool configuration, live incident response or memorisation of a real vendor portfolio. It also does not treat a security framework mapping, a product feature or a POC result as automatic proof of customer compliance.

Examination price: US$149

Below this introduction, publish the 36 final objectives exactly as approved in `ASTRA_Specialist_Objectives_v1.0.1.json`.
